

Experiment Report: Checkout Button Colour Test

Generated 10 Jun 2026 19:16

Recommendation: DO NOT SHIP

Confidence: HIGH | Risk: LOW

- P(treatment best) = 10.7% - treatment likely worse
- Shipping would likely hurt revenue
- Expected value of shipping: \$-166.45/day vs keeping control: \$0.00/day

Experiment design

Field	Value
Hypothesis	Changing the CTA button from grey to green increases conversion rate
Variants	Control (Grey Button) vs Treatment (Green Button)
Sample size	147,202 control / 147,276 treatment
Duration	22 days
Significance level	alpha = 0.05

Frequentist results

Metric	Control	Treatment	Lift
Conversion rate	12.04%	11.89%	-1.23% rel.
95% CI	[11.87%, 12.21%]	[11.73%, 12.06%]	

Two-proportion z-test: $z = -1.237$, $p = 0.2161$ (not significant at $\alpha = 0.05$). Power: 100.0% for a 10% MDE (required $n = 11,954/\text{group}$).

Bayesian results

Metric	Value
P(treatment > control)	10.7%
Expected relative uplift	-1.23%
Expected loss if shipping treatment	0.1548 pp
Expected loss if keeping control	0.0062 pp
Control 95% credible interval	[11.87%, 12.21%]
Treatment 95% credible interval	[11.73%, 12.06%]

Prior: Beta(1, 1)

Business impact

Assumptions: 5,000 daily visitors, 50% of traffic affected, \$45.00 revenue per conversion.

Metric	Value
Daily conversion lift	-3.7 conversions/day
Daily revenue lift	\$-166.45/day

Annual revenue lift (point estimate)	\$-60,756
Annual range (treatment CI)	\$-128,231 to \$7,536
EV of shipping vs status quo	\$-166.45/day

Scenario analysis

Scenario	Assumed lift	Daily revenue impact	Annual revenue impact	Probability	Recommendatio
Null (no effect)	+0.000%	\$0.00	\$0	5%	Do not ship
Pessimistic	-0.312%	\$-351.32	\$-128,231	10%	Do not ship
Base case	-0.148%	\$-166.45	\$-60,756	65%	Do not ship
Optimistic	+0.018%	\$20.65	\$7,536	20%	Continue testing

Caveats

- Annualised figures extrapolate a short test window; seasonality and novelty effects may erode the lift.
- Revenue impact assumes the conversion lift is the only effect (no change in average order value).
- Scenario probabilities are illustrative weights, not posterior probabilities.
